

Srishti Sanghi

My name is Srishti Sanghi and I was born and brought up in New Delhi. I decided to become a scientist when I was 18 years old and so I took up a Microbiology (hons) course in the University of Delhi followed by a Masters course in Stem cell and tissue engineering at Panjab University soon after graduation. I am currently working as a Project fellow in Dr Pinky Kain Sharma's Neurobiology and genetics lab at the Regional Centre for Biotechnology, Faridabad. My work revolves around studying the feeding behaviour and analysing taste neural circuits in *Drosophila melanogaster*. Besides my passion for science, my hobbies include dancing, playing the piano, sketching and reading.
