

Sonal Aggarwal

I was born and lived the entirety of my teenage years in New Delhi, India. Since I was a very small kid, I have been extremely passionate about dancing. Growing up, I developed a keen interest in mathematics and physics and decided to pursue engineering when I was 18. I care deeply about holistic health: mental, physical and spiritual well-being. My hobbies are cooking cuisines from all over the world, reading ALL sorts of books, dancing, writing. I invest a lot of time into studying psychology, economics, machine learning and human behaviour. I practise yoga and pilates and fast consistently. I can speak Hindi, English and French fluently and basic proficiency in Dutch. I care strongly about the right to education, protection of children from abuse and try to keep my carbon-footprint in my daily life to a minimum.

Education & Career:

I completed my primary and secondary education from N.K.Bagrodia Public School, New Delhi. Before starting my bachelors, I faced a dilemma in between an academic career vs an engineering career. Ultimately, I chose to pursue engineering from Delhi Technological University, New Delhi, India in the branch of Electrical and Electronics Engineering. After completing my graduation, I started to work with Daikin Europe N.V in city of Ghent, Belgium. My role in the company is of System Designer and Technical Writer/Specialist. In easier terms, In a team of engineers, we analyse how the system and its various components will work. I then write down the logic for our system for our software developers and help them make the software for our components. Then, I follow up the testing of this software till the product is ready for mass production.

A quote that inspires me :

Between stimulus and response, there is a space.

In that space is our power to choose our response.

In our response lies our growth and our freedom.

By Victor E.Frankl
